US Citizen at Ogden, Utah

Education & Certificates

- B.S. in Software Engineering from Utah Tech University (GPA: 3.91) Status - Graduated

Work History

Full-Stack Software Engineer, Tdooz, UT

May 2025 to May 2026

- Built an event-driven vendor-to-customer messaging system using TypeScript, React, HTML, and CSS, deploying via Docker on AWS EC2, reducing appointment support tickets.
- Developed an end-to-end vendor payout system in Go and TypeScript, storing payout records in PostgreSQL and integrating with Stripe's REST API, allowing admins to review and manually adjust automated payouts before sending to vendor Stripe accounts.
- Migrated mobile app to Next.js web application with TypeScript and CSS while deployed via a GitHub Actions CI/CD pipeline, expanding booking access to any device and browser.

Software Engineer Intern, Ilico Genetics, PA

Oct. 2024 to May 2025

- Developed a machine-learning microservice for patient records in Python FastAPI service, reducing prediction time by over 200% compared to legacy Node.js system while allowing for a continuous data pipeline to train future models.
- Built authentication middleware in JavaScript and Express.js that integrates with MongoDB records so that labs can manage users and leads can have elevated privileges.
- Redesigned patient management UI in React, JavaScript, and CSS with a data-table layout so that lab assistants can perform batch operations on patient records in an Excel-like UI.

Software Engineer Intern, Utah Tech University, UT

May 2023 to Aug. 2024

- Optimized C# online systems with the use of bit-packing and caching optimizations so that a render texture sync system draws files 150% faster than the old system.
- Created a lab progress save system using .NET to store lab progress as a binary format so that students can quickly retrieve and share their progress.
- Documented system architecture and maintenance processes in Microsoft Word and PowerPoint, presenting findings to professors and other software engineering teams.
