Education & Certificates

- B.S. in Software Engineering from Utah Tech University (GPA: 3.91) Status - Graduated

Work History

Full-Stack Software Engineer, Tdooz, UT

May 2025 to Present

- Created a vendor payout interface with TypeScript, JavaScript, HTML, CSS, and React, integrating Stripe, allowing admins to review and manually adjust automated payouts.
- Built a customer messaging system using PostgreSQL and Go, deployed on AWS (EC2), allowing mobile and web users to communicate in real time.
- Built a GitHub Actions CI/CD pipeline to deploy microservices as Docker containers, enabling a cross-functional team to ship features faster with instant rollbacks.

Software Engineer Intern, Illico Genetics, PA

Oct. 2024 to May 2025

- Developed a patient record machine-learning API with Python, FastAPI, and Scikit-learn, increasing prediction speed by batching records and hot loading.
- Built out multi-role access controls using Node.js and Express.js authorization middleware, establishing strict data permissions for lab assistants and doctors.

Software Engineer Intern, Utah Tech University, UT

May 2023 to Aug. 2024

- Optimized C# online systems with the use of bit-packing and caching optimizations so that a render texture sync system draws files 2.5x faster than the old system.
- Created persistent lab progress across 14 assignments by building a .NET Core and Unity save system with automatic semester resets so incoming students start fresh.

Projects

The Bias Post, bias-post.angelv.dev

- Built a Next.js application that connects to OpenAI's API, allowing users to measure bias in news articles with AI and use LLM's to summarize model predictions alongside articles.
- Created an encoder-classifier by fine-tuning DistILBERT and training a classifier with PyTorch on 40,000 articles, achieving 88% test accuracy on detecting bias in articles.
